Interpretation:

- Elevated Creatinine Levels:** Higher-than-normal creatinine levels in the blood can indicate impaired kidney function or kidney disease, such as chronic kidney disease (CKD) or acute kidney injury (AKI). Elevated levels may also occur due to dehydration, muscle injury, or certain medications.
- Low Creatinine Levels:** While less common, low levels of creatinine can occur in people with very low muscle mass or severe malnutrition.

Negative for RNASEP

Invalid test. Repeat sample recommended.

Comments:

Influenza (flu) is a contagious respiratory illness caused by influenza viruses. It can cause mild to severe illness. There are two main types of influenza (flu) virus: Types A and B. The influenza A virus can be subdivided into different serotypes based on the antibody response to these viruses. This assay detects the 3 subtypes, Influenza A, H1N1, H3N2 and influenza B. Respiratory syncytial virus (RSV) causes infections of the lungs and respiratory tract. It usually causes mild, cold-like symptoms. Most people recover in a week or two, but RSV can be serious, especially for infants and older adults.

Remarks:

- Positive results are indicative of presence of SARS-COV-2, Influenza or RSV RNA. However, clinical correlation along with patient history is necessary to determine patient infection status. Positive infection also does not rule out the bacterial infection or co-infection with other viruses.
- Negative results must be combined with clinical observations and patient history. Negative results do not exclude influenza infection and should not be used as the sole basis for patient management.
- Presence of inhibitors, mutations & insufficient RNA can influence the result.
- RNase P serves as an internal control. H1N1 Test is conducted as per protocol of CDC protocol.
- Little is known about epidemiology and outcomes of coinfection between SARS-COV-2, influenza, or RSV virus. Such infections should not be ruled out.

Note:

1. ICMR Registration number for Covid-19 is ACLLB.
2. Test conducted on Nasopharyngeal/ Oropharyngeal Swabs in VTM.
3. The result of this test pertain to the sample received.
4. Covid-19 Test conducted as per kits approved by ICMR/USFDA/CE-IVD/EUA-FDA.
